Ms. Marlene H. Dortch, Secretary
Federal Communications Commission
445 12th Street SW
Washington, DC 20554

Dear Ms. Dortch,

I am a recent graduate of Metropolitan State College in Denver, Colorado and am writing to encourage your support of **LightSquared**'s proposal; launching a 4G-LTE network for the region. I believe this network would be an unprecedented boost to the economy in Colorado.

As a recent graduate who is searching for her first professional job, I understand the need to be connected at all times. With such a competitive job market it is important to be aware of new jobs as soon as they are posted. The luxury of being one of the first applicants gives me an edge in a tough market. With a 4G network I can have access to websites and emails I subscribe to that notify me of new positions, even when I am not in front of my computer. When traveling to other areas of the Front Range I would like to retain my connectivity and this network would make that happen.

My generation is so electronically connected and understands that social networking is a new tool with a purpose that extends beyond keeping in touch with friends. Social networking is yet another level of technology that can allow connections to people that can lead to future job possibilities. With a 4G network I can be constantly in touch with people, and this is another way I can be aware of what is happening right now in my industry. It would allow me to have my finger on the pulse of what is happening in Denver and in my field of interest at all times.

I hope that you will support the network and the possibilities it will create for the job market at a time when myself, and so many of my peers are eagerly entering the work force.

Sincerely,

Cody Broussard
